Abstract

RAMP (Robotics and Automation Marketplace) is an online platform that aims to accelerate production through the use of robotics, targeting the manufacturing SMEs. RAMP provides tools that facilitate the matchmaking and online collaboration between manufacturing SMEs, automation solution suppliers and consultancy services providers, but also tools that support the everyday work of all the relevant parties. As such, certain data is collected, mainly concerning information and data of the companies that sign up in RAMP. The way that sensitive, and especially personal, data is respected and protected in RAMP is described in this report, in terms of data protection and cyber-security. This report is an update on the previous report of 2022, D2.7 Data protection in the RAMP Marketplace 2.0.
